Siemens provides integrated and reliable data center solutions and services for maximum uptime, increased efficiency and to meet the growing demands of safe and secure IT processing.

### What we offer
- **Maximum uptime and reliability**
  - Due to higher ability to prevent, detect, respond to and recover from incidents and business interruptions.
- **Reduced Total Cost of Ownership**
  - Through our superior technology that reduces energy consumption, installation and maintenance costs.
- **Enhanced efficiency**
  - Offered through our energy optimization services.
- **Compliance with operational risk management processes**
  - Ensured through our life cycle management process.
- **Long-term investment protection**
  - Avoiding costly interruptions and system failures.
- **Safe and secure facilities, assets and data**
  - Improving the protection of critical infrastructure.
- **Reduced carbon footprint**
  - Via our environmental portfolio and the significant reduction in carbon emissions and energy costs.
- **Through our global solutions and local expertise**
  - We help drive all kinds of businesses.

### Data center solutions from one source
- **Energy efficiency**
  - We offer solutions that reduce energy consumption and costs.
- **Total integrated power distribution**
  - Providing a complete solution for power distribution, energy monitoring, safety, security and facility management systems.
- **Life safety and security**
  - Ensuring the safety of people and assets.

### Services
- **Life cycle management**
  - Providing comprehensive services for the entire life cycle of a data center.
- **Energy optimization services**
  - Enhancing energy efficiency through innovative solutions.
- **Knowledge services**
  - Tailored services to meet specific needs.

### DCIM
- **Data Center Infrastructure Management (DCIM)**
  - A new integrated approach that brings together IT and facility management to optimize efficiency.
- **Optimized efficiency**
  - Innovative features like integrated dashboards for monitoring and reporting.
- **Higher flexibility**
  - Customized solutions that allow the dynamic allocation of resources while reducing life cycle costs.
- **Future-proof architecture**
  - Flexible software design with open protocols to allow for integrations with various management systems.

Through our solutions, we support businesses in maximizing their uptime and efficiency, ensuring the safety and security of their data centers.
