Planning Tool – fire safety and security solutions for data centers

Answers for infrastructure.

Fire control panels

Aspirating smoke detection

Point type fire detectors

Releasing control panels

Alarm indicators

Horns, speakers, strobes

Emergency Voice System

Video surveillance

Access control

Intrusion detection

Suppression with Sinorix 227

Suppression with Sinorix 1230

Pull, abort & release stations

Fire safety and security solutions for data centers

Answers for infrastructure.
Planning Tool – fire safety and security solutions for data centers

Answers for infrastructure.

Integrated and innovative safety

Identifying and assessing risks is the first step in establishing a Fire Safety Plan. Our Fire Safety Planning tool helps you identify and assess risks and develop a tailored Fire Safety Plan – a clear, logical and structured basis for your fire safety solution. It’s designed to simplify the planning process and ensure that the Fire Safety Plan is built around the specific needs of your building.

Integrated solutions for your safety

Siemens offers a complete range of fire safety solutions, from fire detection, evacuation, and extinguishing to integrated systems that combine all three elements. Our solutions are designed to be fully integrated, meaning they work seamlessly together to provide maximum safety and security.

Complete solutions for a safe and secure data center – with a single partner

Data centers are critical to many companies’ information infrastructures. No company can afford the failure of its networks and servers because no business can afford downtime or the loss of irreplaceable data and market presence. For some industries, even one or two hours of downtime can be devastating. That’s why it’s important to provide your data center with the highest level of safety.

Our fire safety and security solutions are tailored exactly to your data center’s requirements. They offer you maximum safety against fire and security risks while helping to ensure uptime and availability of service. Based on the concept of a single, innovative partner, we provide everything including fire detection, security and extinguishing. We also provide expert system design, installation and after-sales service.

Complete fire detection with our leading edge H-series detectors.

H-series detectors provide 24/7 monitoring of your building’s environment, ensuring that any potential fire hazards are detected and addressed promptly. Our detectors are designed to be highly sensitive and reliable, with a wide range of features to suit different applications.

Our fire safety and security solutions are tailored exactly to your data center’s requirements.
