PSS®E Users Group Meetings— A New Format

Shannon Jacobus
shannon.jacobus@siemens.com

Beginning in 2011, Siemens PTI has expanded meeting coverage and introduced a new format for PSS®E Users Group Meetings (UGMs) to increase the depth of each meeting and improve the learning experience for users.

We have increased the number of meetings to include three U.S. locations and four international locations. The expanded meeting coverage facilitates smaller, more concentrated meetings, enhancing the contact between presenters and users. Users will have a greater opportunity to network with product engineers and managers, voice concerns and share ideas. Also since there are multiple meeting locations, users may choose one closer to home, reducing travel time and expenses.

In the past, meetings for other PSS® software in the PSS® Product Suite were held in conjunction with the PSS®E UGM. As part of the new format, meetings for PSS®MUST, PSS®ODMS and MOD® will not be held together with PSS®E UGMs. This allows us to focus more on each software product and the needs of users.

The new agenda for PSS®E UGMs will not only cover material on PSS®E but will also include hot topics, problems and solutions specific to the regional location. Users will discover ways to make work easier, enhance professional expertise and increase their value to their company.

Recently, Siemens PTI held the first 2011 PSS®E UGM in Salt Lake City, Utah where users in the Western U.S. enjoyed presentations on PSLF® to PSS®E data conversion and learned how to use PSS®E to solve planning challenges in their region.

A schedule of upcoming PSS®E UGMs with tentative dates and locations is found on the PSS®E support site https://www.pti-us.com/pti/software/psse/user_support.cfm. Check out what Siemens PTI has planned for presentations at the PSS®E UGM in your region!
