I/O Modules
Overview

Model A53434 AB Switch shown for reference purposes only! Actual unit selected may vary in mounting and features.

SIEMENS AB Switch, (53434 Series) is a general purpose device used to provide RS-232 redundant switching for office and field applications. It is normally used in conjunction with two of SIEMENS 9-port Wayside Communications Controller / Field Protocol Device, WCC/FPD’s (53401 Series) to provide redundant communication with code lines.

SIEMENS AB Switch and the two connected SIEMENS WCC/FPD units communicate via an Echelon® (LonTalk®) LAN. The AB Switch is constantly checking the health of the the WCC/FPD’s and if any problem is detected with the primary unit, the AB Switch automatically switches all lines to the backup unit.

The AB Switch utilizes magnetically-latched relays for line control. In the unlikely event that the AB Switch should fail, the relays will remain latched in the current state and the on-line WCC/FPD unit will continue to operate without interruption. Once the relays are latched in the failed state, a switchover is not possible until the AB Switch is once again operational.

SIEMENS Wayside Communications Controller/Field Protocol Devices, WCC/FPD’s (53401 Series) is a general purpose communications controller and protocol converter for use in communications systems. It is configured for use through the local diagnostic port and/or remotely via dial-up or LAN/WAN connections. The unit is fully compatible with SIEMENS ASERVER & WCC MAINT. Utilities, and can be diagnosed and monitored remotely. Multiple units can be clustered together to perform front end processing and Cluster Controller functionally.
NYK:9000534340001

**AB Switch Module**
- Neuron® Echelon® 10 MHZ
- Echelon® LonTalk® port for maintenance
- Easily mountable on standard relay racks, instrument house backboards or can even be shelf mounted
- Weight is approx. 4.6 lbs. (2.09 kgs.)
- Operates in -40°F to +160°F (-40°C to +70°C) @ up to 95% Non-Condensing Relative Humidity
- (12) RS-232 ports
- Solid state design
- Provides automatic fail detection and switch over operation for primary to backup
  (When used in conjunction with the WCC/FPD)
- Input power 9 VDC - 16 VDC
- (12) inputs
- (12) outputs
- No cable routing bracket

NYK:9000534010101

**Packet Switch Module**
- Echelon® LonTalk® port for maintenance
- Easily mountable on standard relay racks, instrument house backboards or can even be shelf mounted
- Weight is approx. 4.6 lbs. (2.09 kgs.)
- Operates in -40°F to +160°F (-40°C to +70°C) @ up to 95% Non-Condensing Relative Humidity
- Solid state design
- Input power 30 VDC - 80 VDC
Wayside Communications Module
- Echelon® LonTalk® port for maintenance
- Easily mountable on standard relay racks, instrument house backboards or can even be shelf mounted
- Weight is approx. 4.6 lbs. (2.09 kgs.)
- Operates in -40°F to +160°F (-40°C to +70°C) @ up to 95% Non-Condensing Relative Humidity
- Solid state design
- Input power 10 VDC - 30 VDC
- Power consumption 10 W
- (8) inputs
- (8) outputs

Applicable for all Communications Modules
Overview

SIEMENS RailFusion platform is the next generation of remote monitoring and intelligent asset management.

Our platform is designed with the railroad in mind, and is backed by a dedicated team that is there to support the railroads with custom solutions.

With Trillions of data points, billions of maintenance dollars, and millions of unique assets spread across thousands of miles and dozens of incompatible systems, the need for a comprehensive monitoring solution has never been more important. Siemens addresses these concerns, by providing one platform that can intelligently manage your railroad assets.

RailFusion is designed to be an all-in-one solution, enabling everything from retrieving event logs, to managing software and configurations, to controlling devices and more. Whatever the need for asset management, analytics, trending, control, or automation, RailFusion can be the answer.

RailFusion features customizable alarms, reports, and notification methods, catered to each customer. With a user interface that is web-based, RailFusion can be accessed from anywhere, providing a virtual field network without the need for customer IT support, product experts, or cellular data contracts for the field.

Features

- Real-time crossing occupation information for things like First Responders, Public Information Systems, Railroad Help Desks, Dispatch, or Train Engineers and Crew
- Tracking and health monitoring of mobile assets such as End of Train (EOT) devices
- Intelligence for Predictive / Prescriptive Maintenance of assets based on usage and manufacturer instructions
- Support for automated inspection of asset functionality for safe operations
- Notification of critical alarm conditions for quick response and resolution
- Enables assessment of cost, effort, and operational impact for specific assets

There is no doubt that operating a railroad is expensive, especially when faced with the loss of an experienced workforce and the need to do more with less. Real intelligence from the infinite barrage of data available is the key to safety, operational success, and cost control.
**Overview**

**SIEMENS** Wayside Alarm Management System (WAMS) manages data collected from event recorders supporting railroad operations.

WAMS Status Manager application collects data from the network and notifies users with e-mail, cell phone text messages, and FAX. Users can use WebWAMS to log into WAMS system remotely and check the status of railroad wayside locations.

WAMS supports federally-mandated inspection of railroad wayside equipment by automating many inspection steps and by providing a secure, on-line process for handling inspection reports.

Real time monitoring and complete status documenting at your finger tips. WAMS is an invaluable operations and maintenance tool and a cost effective management resource.
**Overview**

**SIEMENS** Office Communications Gateway (OCG) is a standalone executable program that runs on the Windows® operating system.

It was designed to bring the ATCS over IP and NMS functionality of the Siemens Wayside Cluster Controller (WCC) to the PC platform. OCG adds diversity and scalability to Advanced Train Control System (ATCS) networks, providing an open-ended means to control large systems with no investment in hardware other than the PC Workstation/Server.

OCG provides the interface between the Office Dispatch System and the Field Code Line Network for ATCS networks. OCG is functionally identical to the Siemens Wayside Communications Controller (WCC), with the exception of the serial interface protocols, as OCG is an IP based system.

OCG is capable of controlling more Front End Processor (FEP) (HUB/LCT) processes than the WCC. In its current release, OCG supports up to (32) simultaneous FEP processes while the WCC supports up to (3) FEP processes. OCG is backward compatible with WCC clusters, and may be freely integrated into existing systems, intermixing with conventional WCCs as part of a migration strategy.

Appropriately configured individual codelines are quickly and easily transferred from the WCC to OCG (and back) using the **SIEMENS** suite of network management utilities (Aserver/WCCMaint). OCG will run HUB and Line Control Task (LCT) processes in any combination.
Overview

Model A53475 WCM Series Wayside Communication Manager shown for reference purposes only! Actual unit selected may vary in mounting and features.

SIEMENS Wayside Communications Manager (WCM) allows end users to consolidate multiple communication and signaling devices operating on public and private communications networks into a centralized communications system.

Providing simple user interfaces for monitoring and configuration. For control point applications, the WCM provides a minimal signal input capability with built-in logic execution which can be communicated over the user's network.

As a communication protocol converter the WCM supports a wide range of modern and legacy communication protocols and provides inter-message protocol conversion communications. As a message router, the WCM provides configurable and automatic routing capabilities within many different kinds of networks as well as provides network redundancy support.

Features

- Communication protocols suite for both Positive Train Control (PTC) and Advanced Train Control System (ATCS) based radios for interoperability
- Supports multiple ethernet and serial interfaces to interconnect to wayside devices
- Integrates seamlessly with existing Centralized Traffic Control (CTC) systems, Network Management System (NMS) tools and Simple Network Management Protocol (SNMP) based architecture.
- Provides a complete migration path to PTC while leveraging existing assets
- Unmatched connectivity options to data radios
Wayside Communications Manager
- Converts Echelon® messages to ethernet messages
- Easily mountable on standard relay racks, instrument house backboards or can even be shelf mounted
- Weight is approx. 8.3 lbs. (3.76 kgs.)
- Operates in -40º F to +160º F (-40ºC to +70ºC) @ up to 95% Non-Condensing Relative Humidity
- Input voltage 9 VDC to 32 VDC, isolated, reverse polarity
- (4) Ethernet ports
- (1) DB-25 RS-232 / RS-422 Sync / Async ports
- (8) digital inputs

Applicable for A53475 Wayside Communications Manager

Power Interface Module
- Weight is approx. 1.4 lbs. (0.63 kgs.)
- Operates in -40º F to +160º F (-40ºC to +70ºC) @ up to 95% Non-Condensing Relative Humidity

Wayside Communications Systems Products
Overview

Wayside Communications Systems Products

Wayside Communications Package

Features

- Separate CPU II, DC / DC Converter and Radio modules provided to simplify system maintenance issues and provide for more flexible installation options

- RS-232 / RS422 connection option on two client ports

- High-speed (1.2Mb/s) client LAN port allows WCP CPU II to directly connect to other vital and non-vital I/O modules concurrently

- Front-panel push-button configuration no laptop needed during routine maintenance

- Outbound RSSI reading provides additional system information of signal strength at WCP location

- Optional on-board ladder-logic processing for code system applications

- Protocol emulation and conversion of many industry standard code-line protocols

- Full non-volatile event log built in with hardware real-time clock

- Full duplexer operation at 4800 baud using GMSK direct FM signaling with extensive error detection and correction
WCP CPU Module
- Converts Echelon® messages to ethernet messages
- Easily mountable on standard relay racks, instrument house backboards or can even be shelf mounted
- Weight is approx. 4.6 lbs. (2.09 kgs.)
- Operates in -40° F to +160° F (-40°C to +70°C) @ up to 95% Non-Condensing Relative Humidity
- Quiescent power consumption is approx. 295 mA @ 13.8 V
- Input voltage 10 VDC to 36 VDC
- (2) RS-232 25 pin connectors
- (1) DB-9 9 pin connector
- (1) 09500 cable

Applicable for all WCP CPU Modules

Wayside Communications Systems Products
Overview

Model A53101 I/O Module shown for reference purposes only! Actual unit selected may vary in mounting and features.

SIEMENS Bipolar I/O module supplies eight bipolar outputs to replace an LCS unit and to drive existing final stick relays. A total of 14 unipolar indication inputs are also available. The module is controlled by an on-board Echelon® Neuron™ LAN and delivered to the bipolar outputs either continuously or in pulsed format (configurable). Opto-isolated read-back circuits verify delivery of each input. All inputs and outputs are also fully optically isolated to prevent common-mode problems and to enhance their ability to withstand voltage surges.

Inputs are sensed at a configurable rate and the module generates an indication message via LonTalk™ each time a change of state occurs. A programmable indication hold-off time allows interlocking circuits to stabilize before the change-of-state message is generated. The module provides an indication battery output (KINDIS) that can be fed into the input circuits to allow the unit to sense input circuit relay contact states. Additional LonTalk™ messages supported include recheck, diagnostics, configuration control, and error status updates.

Features

- Bipolar outputs for final stick relays
- Front panel LED status indicators are provided for each I/O circuit for ease of maintenance and troubleshooting.
- Input/Output termination points and interface to the module are accomplished via a top-mounted, removable plug connector. Configuration data for the module is retained in a user-programmable EEPROM device located in the connector. This allows the module to be replaced during maintenance without the need for reconfiguration.
- The module operates directly from the signal battery and 2,000 volts rms isolation is provided by the transformer-coupled LonTalk™ interface.
- Unipolar outputs for interface or vital relay drive. It essentially identical to the Bipolar I/O module except that a total of (30) unipolar circuits are supplied. The circuits can be allocated for any combination of inputs and outputs.
- Relay outputs, while sharing roughly the same physical characteristics as the bipolar and unipolar I/O modules, the relay output module contains 15 individually controllable, nonvital relays that provide contact options that can be jumpered to provide a combination of Form A and Form C outputs.
- The module is available with either latched or non-latched relays. Latched relays remain in the previously-set state position and are unaffected by equipment restarts or power failure.
- A latched relay module is typically used to drive vital signal control relays.
**Bipolar I/O Module (12 V version)**
- Easily mountable on standard relay racks, instrument house backboards or can even be shelf mounted
- Weight is approx. 8.2 lbs. (3.72 kgs.) including connectors
- Operates in -40°F to +160°F (-40°C to +70°C) @ up to 95% Non-Condensing Relative Humidity
- Input voltage 9 VDC to 30 VDC
- (14) bipolar inputs
- (8) bipolar outputs
- (1) KINDIS battery output indicators
- Utilizes 9000-53001-0001 I/O Card

**Unipolar I/O Module (12 V version)**
- Easily mountable on standard relay racks, instrument house backboards or can even be shelf mounted
- Weight is approx. 8.2 lbs. (3.72 kgs.) including connectors
- Operates in -40°F to +160°F (-40°C to +70°C) @ up to 95% Non-Condensing Relative Humidity
- Input voltage 9 VDC to 30 VDC
- Open collector voltage
- Up to (30) unipolar outputs in groups of (8)
- Up to (30) unipolar inputs in groups of (8)
- Utilizes 9000-53004-0001 I/O Card

**Applicable for all I/O Modules**
