

Lighting Controls Business Discontinuation—Phase out of i-3 Control Technology V2

Please note: Siemens Low Voltage & Products has exited the lighting control business.

In 2012, we began the process with the phase out of LCP3000EZ. We are continuing this process by announcing the phase out of i-3 Control Technology.

It is important to point out that Siemens is not exiting lighting control entirely. Our sister division Siemens Building Technologies supports a lighting control product called Gamma Lighting Control.

The following is what to expect during this phase out process of i-3:

1. No new system orders will be taken after September 30, 2014.
2. Requirements for replacement parts will continue to be supported for product under warranty. The timing of the support is calculated based on existing warranty commitments as well as expected normal product mortality life.

If you have any questions about this announcement or have the need for replacement parts for an existing system please contact your Siemens sales representative for more information and assistance.
