Are you planning to Leverage Opportunities that arise in the Electromobility Eco-System?

Thomas Gereke  
Product Lifecycle Manager Security Consultancy  
thomas.gereke@siemens.com

Our electromobility training can help you gain an overview and better understanding of current and upcoming trends: which technologies and solutions are market-ready and scalable, which business models are lucrative, and which aspects, such as interoperability, security or price models, need to be considered to develop sustainable solutions. Find further information on the offered courses by viewing the flyers:

- Electromobility I – Overview & Fundamentals Training & Expert Workshop
- Electromobility II – Business Models, Implementation and Operation Training & Expert Workshop

We also provide customized training courses in the energy business field – please get in touch with us for an individual offer.

Beyond training, we offer business advisory services in the field of electromobility, including on the following aspects:

- Enabling of electromobility strategy by identifying the client's part of the value chain and role
- Development of electromobility concepts and viable business cases
- Identifying relevant regulation and processes (e.g. interoperability)
- Definition of software and hardware requirements as well as operating models

For more information on the course contents please visit the Siemens Power Academy web shop:
