Siemens PTI – Closer to Companies in Latin America

Sergio Zanor
Regional Manager
sergio.zanor@siemens.com

In recent years, Siemens PTI has become more involved in different types of activities in the countries of Latin America to be closer to companies in that region. We work to ensure that engineers receive the knowledge they need and are exposed to the latest technology available on the market. In response to this, Siemens PTI offers the most up-to-date tools in the areas of planning and operation, support and consulting, as well as a wide range of training courses.

Siemens PTI has developed special events in Latin America called PTI Days. These events allow participants to interact for one or two full days with our consulting specialists about the latest news as well as current and future problems confronting the industry. All of this is accomplished using real examples. These events have been very successful in Argentina, Costa Rica, Ecuador, Guatemala and Peru, and for this reason, Siemens PTI will continue to develop PTI Days during 2014.

Siemens PTI’s PSS® Product Suite offers many advantages to companies in the electricity sector throughout Latin America. The PSS® Product Suite includes different tools such as PSS®ODMS, PSS®E, PSS®MOD, PSS®SINCAL and others, so companies have all the information available to them to optimize activities in the areas of planning and operations. The PSS® Product Suite has been well received by major transmission companies that are currently working in the region.

For the last forty five years, Siemens PTI has positioned highly trained consultants across different countries of the region. This lets customers get answers to their daily needs locally, in their native language and in a timely manner.

Siemens PTI conducts training courses that are specialized for each country, to focus on the needs of the specific utility and the local and regional market. Therefore, we developed different types of training on site in Spanish / Portuguese / English languages in countries like Argentina, Brazil, Chile, Colombia, Costa Rica, Guatemala, Guyana, Peru, Uruguay and others. This allows engineers to maximize their time and optimize the use of the tools for the benefit of current and future business.

Siemens PTI is committed to continue to improve our relationships in Latin America. Call the local Siemens office in your country to tell us what you need. We are here to assist you with tools, consulting services, support and training.
